## Chemical Foaming and Nucleating Agent

### General:

Microcell® 502 is a Chemical Foaming and Nucleating Agent with endothermic decomposition. It is recommended for fine cell foaming of thermoplastic resins by injection-moulding and extrusion preferably at temperatures from  $210^{\circ} \text{ C} - 270^{\circ} \text{ C}$ .

#### **Application**:

Chemical foaming, foaming for weight reduction

\_\_\_\_\_

#### **Ingredients**:

Specially formulated multi-component system

| Start of decomposition | approx. 195° C            |
|------------------------|---------------------------|
| Processing temperature | 210° C – 270° C           |
| Dosing                 | 0,3 % -1,0 %              |
| Appearance             | White free-flowing powder |
| Characteristics        | Endothermal decomposition |
| Packaging              | 25 kg card board box      |

The doses indicated are recommendations based on experience. The optimum dose for each individual case of application should be determined in practical trials. All information given herein is only a recommendation. Its use shall remain the sole responsibility of the customer.
