

## Technical Data

### Microflow 812

#### Nucleating Agent for HDPE

---

##### General

Microflow 812 is a nucleating agent for HDPE and speeds up the solidification of the HDPE and results in shorter cooling times.

Microflow 812 is supplied in granules

##### Properties

Shorter cooling times

Power savings

No warpage

No shrinkage

Less frozen- in stresses

**Active substances :** Multi-component system

Processing temperature	190° C – 300 ° C
Dosing	2 – 4 % max.
Active Content	20,0 %
Appearance	White pellets
Transport Information	No dangerous substance
Packaging	20 kg PE bags
Storage	24 months minimum

The doses indicated are recommendations based on experience. The optimum dose for each individual case of application should be determined in practical trials. All information given herein is only a recommendation. Its use shall remain the sole responsibility of the customer.
